FISH FARM CAGES

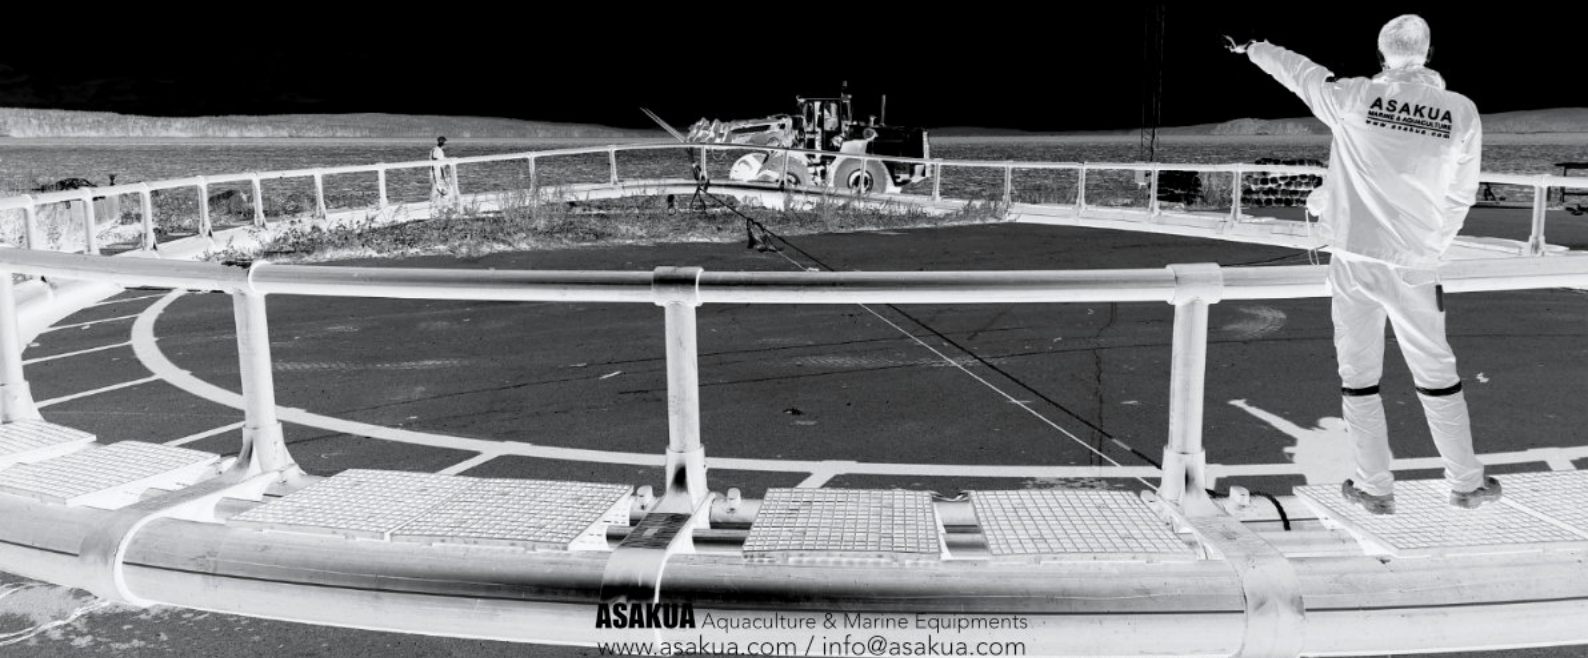

FISH FARMING CAGES

Flexible plastic cages that are made from polyethylene material especially suited for the dynamic loads of the sea are considered a well proven concept for extreme conditions.

Extensive use of strong and high quality polyethylene material in cage brackets eliminates corrosion, minimize expensive and difficult maintenance, and substantially increases cage lifespan compared to steel brackets. This is especially important in areas with high salinity, warm water temperatures, and high energy offshore farm sites where with high UV radiation from the sun.

Asakua is a supplier who is delivering plastic cage systems to fish farmers as turnkey projects. We have roto-moulded and injection brackets ranging 250 to 500mm. Cage team of Asakua are experienced figures thanks to the international projects realized in the past 11 years and recent days.
